Dear Sirs and Madame,

in the future it will be of great importance to suggest to guests that everything is done in your home to protect against infections. Our association has been supporting this as a non-profit organization for more than 10 years. We check textiles for hygiene. Especially mattresses and pillows, as the guest spends a long time and with little clothing. Because not only the COVID-19 virus is a risk of infection, but also mites that excrete an allergen with the feces, which is responsible for 40% of all known allergies. In addition, guests leave bacteria and fungi with their body sweat. The freshly washed bed linen is no protection against these infection risks!

To protect all guests from possible infections, it is therefore necessary to disinfect mattresses and pillows with freshly washed laundry with effective and approved products and to safely kill parasites.

We have certified the Parasitol product as an effective textile hygiene product. Parasitol is a biocide that safely kills viruses, bacteria, fungi and parasites. Parasitol is approved by the Federal Environment Agency and also protects against mites, itch mites and bed bugs!

The Parasitol biocide can be obtained from commercial service providers or from www.thms-hygiene-service.org. The product must be applied to mattresses and pillows before changing to fresh bed linen. You will find that over time the amount of house dust and allergen pollution is greatly reduced, with almost no dust coming out of the mattresses during the six-monthly tests.

A spray of Parasitol at a distance of approx. 50 cm above the textile is sufficient for a good 1 m² of textile surface.

The costs? Not even 50 cents per guest, whereby the 2-time basic hygiene treatment is already included, which can also be provided by external service providers certified by THMS, whereby they are obliged to adhere to the specified prices.

We have been active in Southeast Asia for over 10 years. When we checked the textiles at the Hotel Adlon, we were shocked by the results. It shouldn't look like this in any hotel. Of course, the guest does not see what he is sleeping on, but you should do everything possible to protect yourself from possible infections and to protect the health of every guest in your home.

We are happy to help you and show you how and what is necessary to protect your guests from possible infections, which we reward with the THMS Textile Hygiene Certificate every 6 months after basic hygiene treatment.

This exam is free for you.

We wish you and your guests Health.

Georg Abshof

THMS board.
